

# Wireless Monitoring Solution

## NoiseLYNK™

by Absolute Instrument Systems

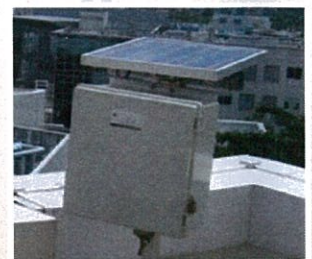

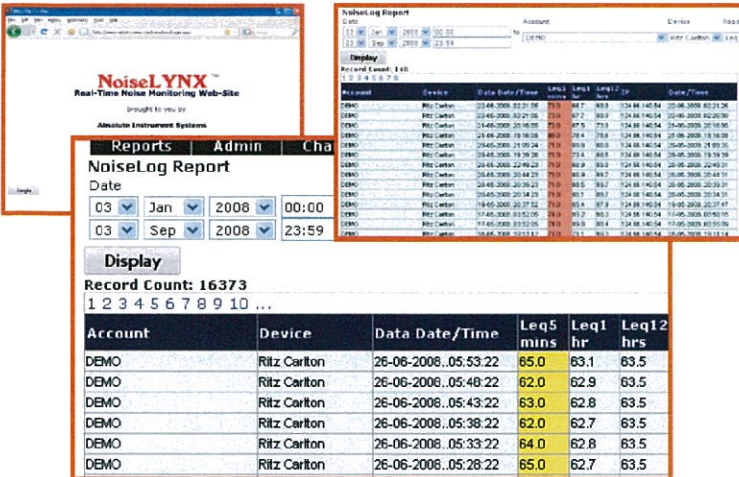

### Automatic Noise Monitoring System (ANMS). Web-based, Wireless monitoring.

Applying mobile-phone and internet technologies, the NoiseLYNK™ automatic noise monitoring system (ANMS) offers savings in penalties and man-hours required in complying with the **Environmental Protection and Management (Control of Noise at Construction Sites) Regulations**.

Noise level data are automatically sent from construction site to a secured website, where data are being analysed for exceeding limits against its respective Types of affected buildings. SMS alerts will be sent to designated persons to inform of the exceeded noise levels. Project Managers now have access to real-time\* noise data and ability to take actions whenever noise limits are exceeded.

Solar panel and battery controller protects data loss and eliminates the need to replace batteries weekly.

- Automatic analysis with reference to legal requirements for different periods. Leq5 mins, 1hr and 12hrs
- SMS alerts
- Does NOT require site PC to be ON 24hr.
- Web-based Real-time Noise monitoring (user-password protected)
- Various report formats including Daily 24hrs, Alerts only, full report can be view anytime, anywhere. Even on mobile phones\*.
